PROFILE

Accomplished IT professional with extensive experience in managing large-scale datacenter operations to ensure optimal performance, security, and availability for thousands of servers.

Remarkable efficiency in executing system upgrades, migrations, and patch management while maintaining strict regulatory compliance to prevent operational disruptions. Proven track record in leading cross-functional teams, coordinating with vendors, and developing streamlined standard operating procedures that enhance reliability and efficiency. Excel in mentoring junior engineers, driving initiatives that improve infrastructure resilience, and aligning technical operations with organizational goals to support long-term strategic objectives.

AREAS OF EXPERTISE

Multi-region Datacenter Management	Identity & Access Management (IAM)	PowerShell & Python Scripting
VMware vSphere & ESXi Administration	Patch Management & Security Compliance	Commvault Backup & Data Protection
Azure and Intune Management	SCCM/MECM Patch Deployment	AVD Development & Implementations
Disaster Recovery & Business Continuity	Cisco UCS Blade Server Administration	Server Provisioning & Automation
Infrastructure Upgrades	Artificial Intelligence Implementations	Zerto/ASR Replication Administration

Systems Engineer | KPMG US, Tampa, FL

2024 – 2026

Oversaw 16 Cisco UCS blade servers and associated software in a multi-domain environment via Cisco UCS Central to ensure uninterrupted operations and system reliability. Maintain performance and availability of 10,000+ VMware virtual servers (versions 7.0.3/8.0.2) across US datacenters with Windows (2016–2025) and RHEL (8.6, 8.8).

Key Contributions:

- **Co-managed Intune and MECM** to enroll, configure, secure, and update enterprise devices; deployed and protected applications; and enforced conditional access policies to control user and device access to corporate resources.
- **Leveraged Entra ID and Active Directory** in a hybrid cloud/on-prem environment to deliver unified identity, device registration, and secure authentication for users across the US and LATAM, enabling seamless access to applications, resources and computer objects running Windows 10/11.
- **Administered and troubleshoot Qualys and BigFix** for 10,000+ nodes across US and LATAM, ensuring patch compliance, vulnerability remediation, and timely application updates to prevent operational downtime and security exposure.
- **Served as Tier 3 escalation** for the digital desk and junior engineers in LATAM, providing advanced troubleshooting, root-cause analysis, technical training, and resolution for complex infrastructure and user-impacting issues.
- **Managed Azure IAM** for onboarding and offboarding, including user provisioning, application access, resource permissions, and virtual server access controls to maintain secure and compliant identity governance.
- **Designed, built, and implemented MCP servers** to publish indexed content to distributed agents as part of an AI Capstone project, improving scalability, performance, and centralized manageability.
- **Processed and filtered questionnaire datasets** using AI Foundry and Python in Azure to perform sentiment analysis, increasing accuracy and reliability of AI-driven insights.
- **Maintained security compliance** across VMware vSphere and Microsoft Azure environments, ensuring adherence to regulatory, legal, and organizational security requirements.
- **Managed 16 Cisco UCS blade servers** and associated applications using Cisco UCS Central in a multi-domain environment, ensuring high availability, operational continuity, and hardware lifecycle reliability.
- **Oversaw 10,000+ virtual servers** across Dallas and Montvale datacenters running VMware 7.0.3/8.0.2 with Windows Server 2016/2019/2022/2025 and RHEL 8.6/8.8, ensuring optimal performance, stability, and resource utilization.

Systems Engineer | 1010Data, New York, New York

2022 – 2024

Maintained three datacenters supporting 1,500+ virtual and physical servers, cloud storage, IAM access, onboarding, offboarding, ensuring compliance. Designed and implemented Azure Virtual Desktop environments leveraging Host Pools, Scaling Plans, Workspaces, FSLogix, MSIX, Images, and Azure Entra ID. Decommissioned physical and virtual servers in all datacenters, documenting processes, creating tickets, and updating GLPI inventories for audits. Created Azure Virtual Desktops in production, development, and testing, including end-to-end documentation, streamlining build processes and operational efficiency.

Key Contributions:

- **Designed and maintained Azure Conditional Access architecture**, including guest/contractor access, device filters, session controls, and resource policies, ensuring secure and seamless access across AVD production, development, and test environments.

- **Deployed and maintained endpoint protection with CrowdStrike**, resolving security vulnerabilities through patching, updates, and Windows 10/11 system hardening to meet organizational compliance requirements.
- **Maintained operations across three datacenters**, securing 1,500+ virtual and physical servers, cloud storage accounts, blob storage, IAM resource access, and server onboarding/offboarding workflows to uphold security and regulatory compliance.
- **Built and administered Azure Virtual Desktop (AVD) environments** across production, development, and test implementing Host Pools, Scaling Plans, Scaling Schedules, Application Groups, Workspaces, MSIX packaging, image creation/refresh cycles, FSLogix, and Entra ID IAM to improve cloud administration and user experience.
- **Managed VMware vSphere infrastructure** spanning three datacenters with 100 physical hosts and ~350 virtual machines across VA, NJ, and NY, ensuring high availability, performance optimization, security, and cost-efficient hardware utilization.
- **Performed quarterly VMware patching** for vCenter Server 7.0 and ESXi 6.7/7.0 hosts, eliminating vulnerabilities and maintaining strict security compliance across all environments.
- **Executed BIOS, firmware, and iDRAC upgrades** on host servers and decommissioned hardware across three datacenters, including documenting removal processes, creating change management tickets, and updating GLPI inventory to meet audit requirements.
- **Developed PowerShell automation scripts** to streamline Veeam backup operations and Zabbix network monitoring tasks, reducing manual workload and improving operational efficiency.
- **Deployed and evaluated Ubuntu Linux ZTP (Zero Touch Provisioning)** automation builds to improve provisioning speed, consistency, and operational efficiency.

Senior Systems Engineer | Seaboard Marine, Ltd., Miami, FL

2012 – 2022

Oversaw daily operations across 15 datacenters, managing 100 servers, 18 SANs, backup systems, and 15 environmental monitoring nodes while guiding junior engineers remotely. Administered 30 ESXi hosts, 12 Hyper-V hosts, and 500+ virtual servers with Distributed Resource Scheduler and High Availability across U.S., Central America, South America, and Caribbean data centers. Maintained VMware and Hyper-V environments, ensuring sufficient storage, network connectivity, patch compliance, and adherence to security policies to prevent operational disruptions. Applied industry best practices for server security and sustained up-to-date operating system and application updates across all Wintel-based systems. Administered Commvault backup environment upgrades from versions 9.0 to 11.0, coordinating deployments, storage provisioning, policy scheduling, and deduplication for secure and reliable data protection. Allocated disk space for SAN equipment including Pure Flash Array, NetApp FAS series, and EMC systems within multi-cluster environments to guarantee business continuity.

Key Contributions:

- **Administered SCCM** to manage enterprise endpoints, software distribution, application deployments, compliance baselines, and system updates across large Windows environments.
- **Utilized Microsoft Intune/Endpoint Manager** to configure, manage, and monitor Windows devices, applications, security policies, and endpoint compliance in a cloud-driven environment.
- **Managed hybrid Entra ID/Active Directory identity infrastructure** across LATAM, delivering unified authentication and secure access to cloud and on-premises applications, servers, and storage resources.
- **Administered Exchange Online** with FOPE, Proofpoint, and Mimecast email filtering, supporting hybrid mail flow, static/dynamic distribution list lifecycle, and mobile mail via Exchange ActiveSync for iOS and Android.
- **Performed 50+ VMware-to-Hyper-V migrations**, reducing VMware licensing and support costs by approximately **\$480,000 annually**.
- **Served as Tier 3 escalation** for helpdesk and junior engineers across Miami and LATAM, providing advanced troubleshooting, training, and resolution for complex infrastructure issues.
- **Oversaw daily operations of 15 datacenters**, managing 500 servers, 18 SANs, backup tapes, and 15 temperature monitoring nodes; trained junior engineers remotely, saving approximately **\$20,000 annually** in travel costs.
- **Managed 30 ESXi hosts, 12 Hyper-V hosts, and 500+ virtual servers** with DRS and HA across US, Central America, South America, and Caribbean datacenters, ensuring reliability and performance.
- **Upgraded VMware vCenter and ESXi hosts** from versions 5.1 to 5.5 to 6.0 to 6.5 across multiple datacenters to strengthen cybersecurity posture, add new features, and maintain vendor support.
- **Provisioned datastores in vCenter and VMM**, presenting new volumes to ESXi and Hyper-V hosts to expand storage capacity and improve availability.
- **Supported VMware and Hyper-V environments**, maintaining storage capacity, network connectivity, security compliance, and patch updates to prevent business interruptions.
- **Implemented industry best practices** to maintain server security, OS patching, and application updates across all Wintel systems company-wide.
- **Upgraded Commvault backup infrastructure** from versions 9.0 to 10.0 to 11.0, managing remote deployments, provisioning storage, configuring policies, applying deduplication, and ensuring successful backup/restore operations to protect data from cyber threats.
- **Provisioned SAN storage** using Pure Flash Array, NetApp FAS (2020/3240/8020/8040), and EMC (3100/3150/CX300/VNX E) across multi-cluster environments to ensure uninterrupted business operations.

- **Monitored network and server environments** using SolarWinds Orion and SolarWinds Virtualization Manager, tracking hardware health, software performance, latency, disk thresholds, memory utilization, and CPU load to maintain host and VM reliability.
- **Managed Azure security and disaster recovery** using Entra ID (IAM), Intune (MDM/MAM), storage accounts, and Azure Site Recovery (ASR) to maintain compliance, business continuity, and workload availability.
- **Supported Microsoft 365** with Exchange, Azure, Office, SharePoint, Teams, Intune and OneDrive, increasing productivity and security.
